Attorney Docket No: 678-1104 (P10576)

EXAMINER INTERVIEW AGENDA

Claim Limitations to be Discussed:

Claims 1 and 10:

- generating at least one displayed entry field inside a boundary line when the user draws the boundary line for forming an entry frame
- resizing the entry field to be suitable for the input data's size whenever input data is input to the generated entry field

Prior Art Documents to be Discussed:

- U.S. Patent No. 5,850,477 to Takada
- U.S. Patent No. 5,956,034 to Sachs

Substantive Issues to be Discussed:

- Whether Takada teaches generating at least one displayed entry field inside a boundary line when the user draws the boundary line for forming an entry frame. FIG. 12B of Takada merely divides already input stroke data 51 into two separate pieces of stroke data 53 and 54, resulting in fields on either side next to a drawn line, rather than inside a drawn line.
- Whether Sachs teaches resizing the entry field to be suitable for the input data's size whenever input data is input to the generated entry field. Sachs clearly states in col. 6, lines 16-18 that a font size is changed when the icon 122 is pressed by the user. The condition of changing a font size based on pressing an icon differs from the condition of inputting data into the generated entry field, as the icon is not included within the entry field in which the font is changed.
- Whether the enclosed proposed claim amendments overcome the present rejections to the claims and/or place the application into condition for allowance.
- Whether the Examiner has other proposed claim amendments for placing the

Attorney Docket No: 678-1104 (P10576)

application into condition for allowance.
